The name will be changed because the developers wish to preserve the integrity of the name they have built.. We have no idea where or why Google got the idea that there was anything wrong with these files.. They might look at the coding nightmare atrocity that OpenSSL became over the same span of time and think: Better to kill off our perfect creation than turn it over to others and have it become that.. So anyone would and should be proud to use and to continue to use this beautiful tool as it is today.. But the world will get some future version, that runs on future operating systems, and future mass storage systems.. Truecrypt Sierra Full Security AuditThere is currently (as of 20142015) a full security audit being carried out on TrueCrypt, and a non-profit organisation is in place to continue to opensource development of TrueCrypt (likely under a new name).. At the time, their web site said it was no longer safe to use TrueCrypt, and they discouraged doing so.. So it is entirely understandable when they imply, as quoted below, that they dont trust anyone else to completely understand and maintain their creation as they have.

Suddenly, for no disclosed reason, we should no longer trust it Having created something of such enduring value, which inherently requires significant trust and buy-in, they are rightly unable to now take it back.. This being said of the latest 7 1a version of the code that has been used by millions, without change, since its release in February of 2012, more than 27 months before.. Truecrypt Sierra How To Transfer YourThe official website has since been replaced by a page simply explaining how to transfer your data out of a TrueCrypt image.. Creating something of TrueCrypts size and complexity, and holding it together as they did across the span of a decade, is a monumental and truly impressive feat of discipline.. An analysis of the extensive changes made to TrueCrypts swan song v7 2 release, and to the codes updated v3. 773a7aa168 [Proliant MI310e Gen8 Drivers For Mac](#)
